# Welcome to NTT Musashino Research and Development Center

Research and development of infrastructure technology to support the next generation of network services

The Information Sharing Laboratory Group is engaged in research and development as well as the creation of business concepts in connection with next-generation networking technologies for the establishment of the broadband and ubiquitous society and platform technologies to support a vast range of service technologies that utilize the next-generation networks. The Group is also promoting R&D focused on environmental information technology that will help foster an information-sharing society friendly to the earth's environment.
